

PROGRAMME PROSPECTUS

NO. 1 ONLINE TECH CLASSES

Africa's prestige online tech academy for ages 5–17. Students don't just learn to code—they build real, shareable projects and graduate with a professional portfolio.

www.theproxyacademy.com

- Coding & Scratch
- Web Design & Development
- Game Development
- AI & Machine Learning
- Cybersecurity & Internet Safety
- Mobile App Development
- Illustration & Animation
- Graphic Design
- Data Analysis
- Digital Marketing

WHY THE PROXY ACADEMY

WE BUILD **CREATORS**, NOT JUST CODERS.

Our mission is to empower young Africans with innovative tech education —equipping them with the skills and resources to lead the continent's digital transformation and create sustainable solutions for the future. Every course is built on one idea: children learn best when they build something real.

Build First, Explain Later

Students produce something tangible in the very first session. Theory follows hands-on experience, so learning always feels like creating.

A Real Portfolio

Every module ends in a finished, shareable asset — a game, a website, an app, a design. Students graduate with proof of skill, not just a certificate.

Project & Capstone Driven

Each course closes with a capstone that combines every skill learned into one polished, real-world project worth showing off.

Founder Mindset

Beyond the tools, students learn to think like creators and problem-solvers — to plan, pitch, and bring an idea to life from start to finish.

HOW LEARNING PROGRESSES

THREE LEVELS OF MASTERY.

Every course is structured in three-month modules that carry students from confident beginner to capable creator. Learners advance through clear competency levels, with a project at every stage and a capstone that proves what they can build.

LEVEL I Foundation First modules	LEVEL II Architect Mid programme	LEVEL III Capstone Final modules
■ Learns by building and modifying ■ Guided project cycles ■ First shareable asset created ■ Confidence with the core tools	■ Combines systems independently ■ Debugs and iterates without help ■ Scopes original projects ■ Presents work to an audience	■ Industry-grade original output ■ Real, portfolio-ready projects ■ Version control & collaboration ■ Graduation project & showcase

10

Mastery Courses

5–17

Ages Welcomed

3 mo

Per Module

100%

Project-based

WHO IT'S FOR

BUILT FOR THE NEXT GENERATION.

Our online tech school is designed for children and teenagers aged 5 to 17 who are curious about technology and eager to learn essential skills for the digital future. We cater to all learning levels — from beginners just starting to explore, to advanced learners ready to dive into complex topics.

THE TEN COURSES

Each course is detailed on the pages that follow — with its full three-month module breakdown, topics covered, and the project students complete at every stage.

COURSE ONE

INTRODUCTION TO CODING

1

Ages 5–17

Scratch & Block Coding

6 Modules · 3 months each

A beginner-friendly journey that introduces young children to programming with visual tools like Scratch and Blockly. Students build interactive stories, games and animations while developing problem-solving skills and logical thinking through play.

WHAT THEY'LL LEARN

Basic problem-solving

Interactive stories, games & animations

Logical & computational thinking

Sequencing, loops & events

Module Breakdown

MODULE 1 · 3 MONTHS

Scratch & Block Coding Basics

Learn the fundamentals of block-based programming.

- The Scratch interface, sprites & backdrops
- Basic motion and event blocks
- Loops and conditionals
- Using "when clicked" and "forever" blocks

Project: A simple animation using motion blocks and sprites.

MODULE 2 · 3 MONTHS

Storytelling with Scratch

Build interactive stories and animations.

- Creating and animating characters
- Looks and sound blocks
- Broadcasting and message handling
- Dialogue, sound effects & background music

Project: An interactive story with character dialogue and sound.

MODULE 3 · 3 MONTHS

Introduction to Game Development

Learn how to create simple games.

- Variables and score tracking
- Control blocks for game logic
- Sensing blocks and collision detection
- Game loops, win/loss conditions & timers

Project: A "Catch the Falling Objects" game.

MODULE 4 · 3 MONTHS

Advanced Game Development

Create more complex, interactive games.

- Advanced variables and operators
- Multiple levels and increasing difficulty
- Clones and lists (arrays)
- Power-ups, obstacles & better game feel

Project: A multi-level platformer with obstacles and rewards.

MODULE 5 · 3 MONTHS

Introduction to Robotics with Scratch

Use Scratch to control real hardware.

- Scratch extensions and hardware
- Makey Makey and micro:bit
- Understanding inputs and outputs
- Controlling LEDs, sensors and motors

Project: An interactive project controlling an external device.

MODULE 6 · CAPSTONE

Capstone Project

Combine every skill into one complete build.

- A fully functional game or interactive story
- Motion, looks, sound and control blocks
- Scoring, multiple levels and complex logic
- Variables, lists & sensing — optional hardware

Outcome: A portfolio-ready original project.

COURSE TWO

AI, ROBOTICS & MACHINE LEARNING

2

Ages 14–17

Python & AI Tools

8 Modules · 3 months each

Artificial Intelligence and Machine Learning power everything from virtual assistants to self-driving cars. This programme introduces teenagers to the fundamentals of AI, hands-on robotics, and the data science and problem-solving skills that shape the future of technology.

WHAT THEY'LL LEARN

Foundations of AI & ML

Data science & Python

Neural networks

Robotics & automation

Responsible, ethical AI

Module Breakdown

MODULE 1 · 3 MONTHS

Introduction to Artificial Intelligence

Understand the basics of AI and its real-world uses.

- What is AI? Its history and future
- AI technologies in daily life
- Algorithms, data and predictions
- Rule-based vs. learning systems

Project: A simple chatbot that responds to user input.

MODULE 2 · 3 MONTHS

Fundamentals of Machine Learning

Learn how machines learn from data.

- Data types, collection and cleaning
- Supervised and unsupervised learning
- Classification and clustering
- Decision trees and K-nearest neighbours

Project: A predictive model using a student grades dataset.

MODULE 3 · 3 MONTHS

Data Science for AI

See how data powers AI and ML models.

- Collecting, analysing & interpreting data
- Big data and exploratory analysis (EDA)
- Python for data analysis
- Pandas & Matplotlib for visualisation

Project: Analyse a dataset and present findings.

MODULE 4 · 3 MONTHS

Deep Learning & Neural Networks

Explore how networks mimic the human brain.

- Neurons, layers and activation functions
- Building basic neural networks
- Backpropagation
- Image recognition and NLP applications

Project: A neural network that classifies images.

MODULE 5 · 3 MONTHS

AI in Robotics

Integrate AI with robotics for smart systems.

- Robotics and AI integration
- Automating tasks
- Navigation and obstacle avoidance
- Sensors, actuators & simulations

Project: A robot that navigates a maze using AI.

MODULE 6 · 3 MONTHS

Natural Language Processing

Learn how AI understands human language.

- NLP applications
- Tokenization and stopwords
- Sentiment analysis
- Language models & text generation

Project: A voice assistant that answers simple questions.

MODULE 7 · 3 MONTHS

AI Ethics & Safety

Understand the ethics behind the technology.

- Algorithmic bias and fairness
- Privacy and data security
- AI's role in society and decisions
- Responsible AI development

Project: A case study on bias in a popular AI system.

MODULE 8 · CAPSTONE

Capstone Project

Build an AI project that solves a real problem.

- Integrates ML, data science & neural networks
- Solves a real-world problem
- Uses Python and external APIs
- Ethical, secure and version-controlled (GitHub)

Outcome: A documented, portfolio-ready AI build.

COURSE THREE

GAME DESIGN & DEVELOPMENT

3

Ages 13–17

Scratch → Godot → Unity

8 Modules · 3 months each

From basic game design principles to advanced development with industry engines, students learn to build interactive and playable games. The curriculum covers 2D and 3D design, game physics, coding, AI and testing — taking learners from first prototype to a fully polished title.

WHAT THEY'LL LEARN

Game design & mechanics

2D & 3D development

Coding for games

Game physics & AI

Testing & publishing

Module Breakdown

MODULE 1 · 3 MONTHS

Introduction to Game Design

Understand the basics of game creation.

- Elements of fun; genres & player types
- Game design documents & storytelling
- Creating characters and environments
- Prototyping and wireframing

Project: A simple 2D game prototype on paper.

MODULE 2 · 3 MONTHS

2D Game Development

Create 2D games using game engines.

- 2D engines (Scratch, Unity 2D)
- Sprites, animations & movement
- Collisions and game physics
- Scoring, levels, power-ups & sound

Project: A fully functional 2D platformer.

MODULE 3 · 3 MONTHS

Introduction to Coding for Games

Use code to create game interactivity.

- Game languages (JavaScript, Python)
- Variables, loops and conditionals
- Game loops and user input
- Debugging and managing assets

Project: An interactive game with player controls and scoring.

MODULE 4 · 3 MONTHS

Advanced 2D Game Mechanics

Explore more complex mechanics and features.

- Advanced movement and controls
- Power-ups, health & multiplayer
- Dynamic difficulty and enemy AI
- Saving progress and animation

Project: A multiplayer game with advanced mechanics and AI.

MODULE 5 · 3 MONTHS

3D Game Development

Transition from 2D to 3D game design.

- 3D engines (Unity, Unreal Engine)
- 3D models, textures and physics
- Environments, characters & lighting
- Camera controls and 3D interactions

Project: A 3D adventure game with puzzles.

MODULE 6 · 3 MONTHS

Game Physics & AI

See how physics and AI enhance gameplay.

- Forces, velocity and momentum
- Particle systems and effects
- NPC behaviour and pathfinding
- Physics-based puzzles and challenges

Project: A game with AI enemies and physics gameplay.

MODULE 7 · 3 MONTHS

Game Testing & Debugging

Ensure stability and a great player experience.

- Playtesting and gathering feedback
- Common bugs and debugging tools
- Balancing difficulty and pacing
- Optimisation and post-launch patching

Project: Playtest, debug and balance a game.

MODULE 8 · CAPSTONE

Capstone Project

Build a complete, polished game.

- Concept to final product in a 2D or 3D engine
- Advanced mechanics (AI, multiplayer, physics)
- Responsive controls, UI and animation
- At least 3 levels · managed with GitHub

Outcome: A publishable, portfolio-ready game.

COURSE FOUR

CYBERSECURITY & INTERNET SAFETY

4

Ages 10–17

Digital Safety & Security

8 Modules · 3 months each

This programme equips young learners with essential digital security knowledge — from recognising online threats to practical skills for safe internet use. Students progress from everyday online safety to encryption, ethical hacking, forensics and cybersecurity careers.

WHAT THEY'LL LEARN

Online safety & privacy

Encryption & network security

Ethical hacking

Cyber forensics

Career pathways

Module Breakdown

MODULE 1 · 3 MONTHS

Cybersecurity & Internet Safety

Understand the basics of staying safe online.

- Online threats: malware, phishing, viruses
- Password safety and safe browsing
- Data privacy and online etiquette
- Understanding your digital footprint

Project: A personal cybersecurity safety plan.

MODULE 2 · 3 MONTHS

Advanced Cybersecurity Concepts

Go deeper into security principles and tools.

- Encryption basics
- Firewalls and antivirus software
- Network security and cyber attacks
- Two-factor authentication & cyber laws

Project: Set up a secure home network.

MODULE 3 · 3 MONTHS

Protecting Personal Data

Keep sensitive data safe from threats.

- Recognising personal data and breaches
- Privacy settings and securing devices
- VPNs and private browsing
- Phishing recognition and cloud security

Project: Build a secure online profile.

MODULE 4 · 3 MONTHS

Introduction to Ethical Hacking

Learn how white-hat hackers protect systems.

- The role of an ethical hacker
- Common hacking techniques
- Penetration testing basics
- Bug bounties and social engineering

Project: A simulated penetration test on a mock site.

MODULE 5 · 3 MONTHS

Internet of Things (IoT) Security

Securesmart devices connected to the internet.

- Connected devices and their vulnerabilities
- Securing smart homes
- IoT encryption and wearables
- Managing updates & learning from case studies

Project: A security plan for smart devices at home.

MODULE 6 · 3 MONTHS

Introduction to Cyber Forensics

Investigate and respond to cyber incidents.

- Digital evidence collection
- Incident response
- Tracking hackers & malware analysis
- Reporting cybercrimes

Project: A simulated cyber-incident investigation.

MODULE 7 · 3 MONTHS

Cybersecurity Careers

Explore opportunities in the field.

- Career paths and certifications (Security+, CEH)
- Building a cybersecurity portfolio
- Networking and finding mentors
- Capture The Flag (CTF) competitions

Project: A personal career development plan.

MODULE 8 · CAPSTONE

Capstone Project

Design a full cybersecurity plan.

- Complete plan for a mock organisation
- Threat detection and incident response
- Data protection and user safety
- Presented as a documented report

Outcome: A professional security report for the portfolio.

COURSE FIVE

WEB DESIGN & DEVELOPMENT

5

Ages 9–17

HTML → JavaScript → React

8 Modules · 3 months each

Students learn to build responsive, interactive websites from the ground up — mastering HTML structure, CSS design and JavaScript interactivity before moving into React and modern frameworks. Every module ends with a live, shareable project on the real internet.

WHAT THEY'LL LEARN

HTML & CSS structure

JavaScript & the DOM

APIs & live data

React & frameworks

Git & deployment

Module Breakdown

MODULE 1 · 3 MONTHS

Introduction to HTML & CSS

Understand the structure and style of web pages.

- Elements, tags and attributes
- Links, images and multimedia
- CSS selectors, colours and the box model
- Introduction to media queries

Project: A personal webpage with text, images and links.

MODULE 2 · 3 MONTHS

Advanced HTML & CSS

Master advanced elements and layouts.

- Semantic HTML and accessibility
- CSS Flexbox and Grid
- Responsive, mobile-first design
- Animations, custom fonts & SEO basics

Project: A responsive multi-page portfolio website.

MODULE 3 · 3 MONTHS

Introduction to JavaScript

Add interactivity to websites.

- Variables, data types and operators
- Conditionals, loops and functions
- The Document Object Model (DOM)
- Debugging and form validation

Project: An interactive quiz built with JavaScript.

MODULE 4 · 3 MONTHS

JavaScript: Intermediate Concepts

Handle more complex tasks with JavaScript.

- Arrays, objects and advanced DOM
- Event handling and callbacks
- localStorage and error handling
- APIs and fetching data

Project: A weather app fetching real-time API data.

MODULE 5 · 3 MONTHS

Introduction to Version Control

Learn the basics of Git and collaboration.

- Git and GitHub fundamentals
- Clone, commit, push and pull
- Branching and merging
- Issues and pull requests

Project: Collaborate on a shared class GitHub project.

MODULE 6 · 3 MONTHS

JavaScript Frameworks (React)

Build dynamic apps with React.

- Components, props and state
- JSX syntax
- Handling events and forms
- React Hooks and external APIs

Project: A to-do list application built in React.

MODULE 7 · 3 MONTHS

Responsive Design & CSS Frameworks

Build fully responsive sites with frameworks.

- Advanced responsive techniques
- Bootstrap grid and components
- Introduction to Tailwind CSS
- Using design systems for consistent UI

Project: A fully responsive blog with Bootstrap or Tailwind.

MODULE 8 · CAPSTONE

Capstone Project

Build a full web application.

- HTML, CSS, JavaScript & React together
- At least 3 pages, fully responsive
- Form functionality and external API
- Managed with Git and GitHub

Outcome: A live, deployed web app for the portfolio.

ILLUSTRATION DESIGN

Ages 9–17

Digital & Traditional Art

8 Modules · 3 months each

Tailored for young learners passionate about visual storytelling, this programme develops essential skills in digital illustration — from drawing fundamentals to professional-grade artwork for print and digital platforms. Students finish with an impressive creative portfolio.

WHAT THEY'LL LEARN

Drawing fundamentals

Digital illustration tools

Visual storytelling

Typography & design

3D & mixed media

Module Breakdown

MODULE 1 · 3 MONTHS

Drawing Fundamentals

Build foundational drawing skills.

- Shapes, lines and forms
- Proportion, anatomy and perspective
- Light, shadow and composition
- Colour theory basics

Project: A sketchbook of line art, shading and forms.

MODULE 2 · 3 MONTHS

Digital Drawing & Tools

Move from traditional to digital drawing.

- Illustration software (Illustrator, Procreate)
- Canvas setup, brushes and layers
- Digital inking techniques
- Grids and guides for precise layouts

Project: A digital character or object.

MODULE 3 · 3 MONTHS

Advanced Digital Illustration

Create detailed, stylised illustrations.

- Advanced inking and colouring
- Masks, clipping paths and textures
- Cell shading and soft shading
- Vector vs. raster; exploring art styles

Project: A detailed digital portrait or landscape.

MODULE 4 · 3 MONTHS

Illustration for Storytelling

Use illustration to tell stories.

- Visual storytelling techniques
- Character design and expression
- Storyboarding and composition
- Paneling and sequencing

Project: A short comic or storyboard.

MODULE 5 · 3 MONTHS

Graphic Design & Typography

Combine illustration with design.

- Typography and text layout
- Visual hierarchy and balance
- Designing logos and icons
- Cohesive designs for branding

Project: An event poster combining illustration and type.

MODULE 6 · 3 MONTHS

3D Illustration & Mixed Media

Blend traditional, digital and 3Dart.

- 3D illustration tools (Blender)
- Modeling, texturing and lighting
- Combining 2D and 3D elements
- Mixed media and product mockups

Project: A 3D-rendered object within a 2D illustration.

MODULE 7 · 3 MONTHS

Illustrating for Digital Platforms

Adapt illustrations for web and mobile.

- Illustrations for web and mobile interfaces
- Resolution, aspect ratios and optimisation
- UI elements and social media graphics
- Motion graphics and exporting

Project: A series of illustrations for an app interface.

MODULE 8 · CAPSTONE

Capstone Project

Create a comprehensive portfolio piece.

- A full illustration project (print or digital)
- Character, environment and narrative pieces
- Proficiency in colour, composition & tools
- Presented with the design process

Outcome: A signature portfolio illustration set.

COURSE SEVEN

DATA ANALYSIS

7

Ages 9–17

Excel → Python → Tableau

8 Modules · 3 months each

Students gain foundational and advanced skills in data analytics — collecting, cleaning, analysing and visualising data to uncover insights. The curriculum builds from spreadsheets to Python, SQL, statistics and Tableau, preparing learners to handle real-world data.

WHAT THEY'LL LEARN

Spreadsheets & dashboards

Python for data

SQL databases

Statistics

Tableau visualisation

Module Breakdown

MODULE 1 · 3 MONTHS

Introduction to Data & Excel

Handle data using spreadsheets.

- Data types, sources and importance
- Excel basics and formulas
- Sorting, filtering and charts
- Data cleaning, ethics and privacy

Project: A personal expense tracker.

MODULE 2 · 3 MONTHS

Data Visualisation with Sheets

Create impactful visualisations.

- Advanced charting and formatting
- Conditional formatting
- Pivot tables and dashboards
- Storytelling with data

Project: A sales performance dashboard.

MODULE 3 · 3 MONTHS

Introduction to Python for Data

Use Python for basic data analysis.

- Python setup and Jupyter Notebooks
- Variables, lists and dictionaries
- Reading and writing CSV data
- NumPy and Pandas basics

Project: Analyse a dataset and generate insights.

MODULE 4 · 3 MONTHS

Intermediate Python for Data

Handle more complex datasets.

- Pandas grouping and aggregation
- Handling missing data
- Matplotlib and Seaborn plots
- Descriptive statistics & time series

Project: A weather-trend analysis from CSV data.

MODULE 5 · 3 MONTHS

Introduction to SQL

Work with databases using SQL.

- Databases and relational models
- SELECT, WHERE and filtering
- Aggregation functions and joins
- Inserting, updating & normalising data

Project: A student-management database with SQL queries.

MODULE 6 · 3 MONTHS

Introduction to Statistical Analysis

Apply statistics to data analysis.

- Central tendency and dispersion
- Probability and distributions
- Hypothesis testing
- Correlation and regression

Project: A statistical analysis identifying trends.

MODULE 7 · 3 MONTHS

Data Visualisation with Tableau

Build professional dashboards.

- Tableau setup and data sources
- Building interactive visualisations
- Calculated fields and blends
- Dashboards and publishing

Project: An interactive sales dashboard in Tableau.

MODULE 8 · CAPSTONE

Capstone Project

Consolidate everything into one analysis.

- A real-world dataset via Python, SQL & Tableau
- Cleaning, visualisation and statistics
- A final presentation of findings
- Collaboration and version control (GitHub)

Outcome: A complete data report for the portfolio.

COURSE EIGHT

GRAPHIC DESIGN

8

Ages 9–17

Photoshop · Illustrator · Canva

8 Modules · 3 months each

This programme develops creativity and technical skill, progressing from core design principles to advanced digital design with industry-standard tools. Students learn to communicate ideas visually and build a professional design portfolio spanning branding, layout and social media.

WHAT THEY'LL LEARN

Design principles

Industry-standard tools

Typography & layout

Branding & logos

Social & web design

Module Breakdown

MODULE 1 · 3 MONTHS

Graphic Design Principles

Understand the basics of visual communication.

- Elements of design
- Balance, contrast, alignment & repetition
- Typography and colour theory
- Visual hierarchy and composition

Project: A poster focused on typography and colour.

MODULE 2 · 3 MONTHS

Digital Design Tools

Get familiar with popular design software.

- Photoshop, Illustrator and Canva
- Vector vs. raster graphics
- Photo editing, layers and masks
- File formats and design workflows

Project: A digital flyer with photos, shapes and text.

MODULE 3 · 3 MONTHS

Advanced Typography & Layout

Master type and appealing layouts.

- Font pairing, kerning and leading
- Grids, margins and alignment
- Designing for print vs. digital
- Brochures, posters and magazines

Project: A two-page magazine spread.

MODULE 4 · 3 MONTHS

Illustration & Icon Design

Create custom illustrations and icons.

- Digital illustration and the pen tool
- Creating vector art
- Designing icons for web and mobile
- Scaling designs across platforms

Project: A custom icon set and small illustration.

MODULE 5 · 3 MONTHS

Branding & Logo Design

Design logos that communicate identity.

- Visual identity and messaging
- Logo principles: simplicity & scalability
- Concept sketching and refining
- Brand style guides and assets

Project: A full brand identity for a company.

MODULE 6 · 3 MONTHS

Designing for Web & Social Media

Create visuals for digital platforms.

- Web graphics and UI/UX basics
- Banners, sliders and web elements
- Social media posts and ads
- Consistent visuals and optimisation

Project: A complete social media campaign.

MODULE 7 · 3 MONTHS

Advanced Digital Illustration

Refine advanced illustration techniques.

- Illustration styles and detailed vectors
- Gradients, shadows and textures
- Storyboarding for illustration
- Animation principles (GIFs, short animations)

Project: A product-advertisement illustration.

MODULE 8 · CAPSTONE

Capstone Project

Design a full visual identity.

- Logo, website mockup and social assets
- A printed brochure
- At least 3 distinct deliverables
- Presented from concept to final product

Outcome: A complete brand portfolio piece.

COURSE NINE

MOBILE APP DEVELOPMENT

9

Ages 9–17

Kotlin & Swift

8 Modules · 3 months each

A hands-on programme that equips students with essential mobile development skills across Android and iOS. Learners master UI/UX design, programming with Kotlin and Swift, and mobile APIs — finishing able to build and publish functional, user-friendly apps.

WHAT THEY'LL LEARN

Android & iOS basics

Kotlin & Swift

Mobile UI/UX

APIs & local storage

Publishing apps

Module Breakdown

MODULE 1 · 3 MONTHS

Introduction to Mobile App Development

Understand app structure, platforms and tools.

- Android and iOS platforms
- IDEs: Android Studio and Xcode
- UX/UI fundamentals
- Simple UI elements and navigation

Project: A simple app with basic UI elements.

MODULE 2 · 3 MONTHS

Programming for Mobile

Learncore programming for apps.

- Kotlin (Android) and Swift (iOS)
- Variables, data types and control flow
- Functions and object-oriented basics
- Handling user input and debugging

Project: A basic calculator app.

MODULE 3 · 3 MONTHS

Mobile UI & Design

Enhance UI/UX for mobile apps.

- Mobile-friendly, responsive interfaces
- Advanced UI: grids, cards, sliders
- Animations and transitions
- Accessibility, Material Design & HIG

Project: A to-do app with a custom UI.

MODULE 4 · 3 MONTHS

Advanced Mobile Programming

Deepen skills and build interactive apps.

- Data structures and app lifecycle
- Managing app states
- Working with APIs to fetch data
- Data persistence and debugging

Project: A weather app fetching real-time data.

MODULE 5 · 3 MONTHS

Data Management & Local Storage

Store and handle data in apps.

- Local databases (SQLite, Room)
- Shared preferences
- Saving data across sessions
- Offline functionality and syncing

Project: A note-taking app that saves data locally.

MODULE 6 · 3 MONTHS

Working with APIs & Networking

Connect apps to external services.

- RESTful APIs and network requests
- Parsing JSON data
- Asynchronous tasks and error handling
- Third-party APIs (Maps, Firebase)

Project: A location-based app using Google Maps.

MODULE 7 · 3 MONTHS

Deployment & Version Control

Prepare apps for release.

- Git and GitHub for apps
- Managing versions and updates
- Creating app bundles and testing
- Publishing to Play Store and App Store

Project: Publish a class app to a store.

MODULE 8 · CAPSTONE

Capstone Project

Build a final, complete mobile app.

- A functional app with at least 3 screens
- UI/UX, local storage and API integration
- Managed with version control
- Prepared for app-store deployment

Outcome: A store-ready app for the portfolio.

COURSE TEN

DIGITAL MARKETING

10

Ages 9–17

Social · SEO · Ads · Analytics

8 Modules · 3 months each

This programme introduces students to the core concepts of digital marketing — from social media strategy and SEO to content creation, paid advertising and analytics. Young learners gain a solid, practical foundation for promoting products and services in the digital space.

WHAT THEY'LL LEARN

Marketing strategy

Social media

SEO & content

Paid advertising

Analytics

Module Breakdown

MODULE 1 · 3 MONTHS

Introduction to Digital Marketing

Understand the fundamentals.

- What digital marketing is and why it matters
- Key platforms and marketing plans
- Identifying target audiences
- Marketing funnels and best practices

Project: A basic marketing plan for a product.

MODULE 2 · 3 MONTHS

Social Media Marketing

Leverage social media for growth.

- Managing platform accounts
- Creating engaging posts
- Paid social advertising and insights
- Content calendars and community management

Project: A month-long social media campaign.

MODULE 3 · 3 MONTHS

Email Marketing

Create and manage email campaigns.

- Email platforms (e.g. Mailchimp)
- Building and segmenting lists
- Engaging content and CTAs
- Automation, metrics and A/B testing

Project: An email campaign with automated follow-ups.

MODULE 4 · 3 MONTHS

SEO & Content Creation

Optimise content for search engines.

- On-page and off-page SEO
- Keyword research
- SEO-friendly content and meta tags
- Backlinks and SEO analytics

Project: Write and optimise a blog post.

MODULE 5 · 3 MONTHS

Introduction to Paid Advertising

Explore paid marketing tactics.

- Pay-per-click (PPC) advertising
- Google Ads search and display
- Facebook and Instagram ads
- Budgeting, ad copy and remarketing

Project: A PPC campaign using Google or Facebook Ads.

MODULE 6 · 3 MONTHS

Content & Influencer Marketing

Create content and work with influencers.

- Content marketing strategies
- Blogs, infographics and video
- Video editing and design (Canva, Capcut)
- Finding and collaborating with influencers

Project: A content plan and influencer collaboration.

MODULE 7 · 3 MONTHS

Analytics & Data-Driven Marketing

Track and analyse marketing efforts.

- Google Analytics and key metrics
- Audience insights
- Conversion tracking and goals
- Marketing reports and A/B testing

Project: Analyse a campaign and suggest optimisations.

MODULE 8 · CAPSTONE

Capstone Project

Build a full marketing strategy.

- A complete strategy for a product or service
- Social media, SEO, email and paid ads
- Performance tracked with analytics tools
- Presented as a detailed report

Outcome: A professional marketing strategy for the portfolio.

ENROL TODAY

READY TO BUILD THE FUTURE?

Give your child the skills, the confidence and the portfolio to lead Africa's digital future. Flexible group, weekend and one-on-one classes are available for every age group—contact us for schedules and to reserve a place.
